Author Index

Ali, G.	Design synthesis of non-symmetrically loaded high-performance disc brakes. Part 1	101–109
Allen, P. D.	The critical speed of a railway vehicle on a roller rig	55–64
Baker, C. J.	The slipstream and wake of a high-speed train	83–99
Beynon, J. H.	Abrasive wear of railway track by solid contaminants	193–205
Bruni, S.	A model of an actively controlled roller rig for test on full-size railway wheelsets	277–288
Bruno, O.	Phototube sensor for monitoring the quality of current collection on overhead electrified railways	231–241
Cai, C. B.	Dynamic effects of vehicles on tracks in the case of raising train speeds	125–135
Cervello, S.	Analysis and design of a low-noise railway wheel	179–192
Cheli, F.	A model of an actively controlled roller rig for test on full-size railway wheelsets	277–288
Chirwa, E. C.	Design of an efficient crashworthy lifeguard for current and future electric multiple unit bogies	217–230
Dahlberg, T.	Some railway settlement models—a critical review	289–300
Dalley, S. J.	The slipstream and wake of a high-speed train	83–99
Donzella, G.	Analysis and design of a low-noise railway wheel	179–192
Dwyer-Joyce, R. S.	Abrasive wear of railway track by solid contaminants	193–205
Dwyer-Joyce, R. S.	Disc machine testing to assess the life of surface-damaged railway track	261–275
Fricke, E.	Network 21: impact on rail freight traffic	37–44
Gao, N.	Disc machine testing to assess the life of surface-damaged railway track	261–275
Gerber, P.	Class Re 465 locomotives for heavy-haul freight service	25–35
Gobbi, M.	On the optimal design of railway passenger vehicles	111–124
Goodman, C. J.	Metro traffic regulation from the passenger perspective	137–147
Grieve, D. G.	Abrasive wear of railway track by solid contaminants	193–205
Grieve, D. G.	Disc machine testing to assess the life of surface-damaged railway track	261–275
Griffin, T.	Ultra light rail developments	149–156
Harrison, M. F.	Calculating speech intelligibility for the design of public address systems at railway stations	319–329
Hecht, M.	European freight vehicle running gear: today's position and future demands	1–11
Hirakawa, K.	On the fatigue design method for high-speed railway axles	73–82
Hoy, A. J.	Design of an efficient crashworthy lifeguard for current and future electric multiple unit bogies	217–230
Iwnicki, S. D.	The critical speed of a railway vehicle on a roller rig	55–64
Johnson, T.	The slipstream and wake of a high-speed train	83–99
Josefson, B. L.	Finite element analyses of rolling contact fatigue crack initiation in railheads	243–259
Knoflacher, H.	Problems caused by the motorway/railway freight traffic share in the Tyrol	45–51
Kubota, M.	On the fatigue design method for high-speed railway axles	73–82
Lacasta Aisa, J.	Talgo automatic gauge change system for freight wagons	13–24
Landi, A.	Phototube sensor for monitoring the quality of current collection on overhead electrified railways	231–241
Lei, X.	Dynamic analysis of the track structure of a high-speed railway using finite elements	301–309
Lopez Gomez, J. L.	Talgo automatic gauge change system for freight wagons	13–24
Lu, Z. W.	Dynamic effects of vehicles on tracks in the case of raising train speeds	125–135
Mahmoud, M. A.	Effect of cracks on the dynamic response of a simple beam subject to a moving load	207–215
Mastinu, G. R. M.	On the optimal design of railway passenger vehicles	111–124
Murata, S.	Metro traffic regulation from the passenger perspective	137–147
Olofsson, U.	Contact mechanics analysis of measured wheel–rail profiles using the finite element method	65–72
Papi, M.	Phototube sensor for monitoring the quality of current collection on overhead electrified railways	231–241
Pohl, M.	Network 21: impact on rail freight traffic	37–44
Pola, A.	Analysis and design of a low-noise railway wheel	179–192
Pratt, I.	The development of a railway dynamics modelling and simulation package to cater for current industrial trends	167–178
Quinn, A.	The slipstream and wake of a high-speed train	83–99
Resta, F.	A model of an actively controlled roller rig for test on full-size railway wheelsets	277–288
Ringsberg, J. W.	Finite element analyses of rolling contact fatigue crack initiation in railheads	243–259
Sani, L.	Phototube sensor for monitoring the quality of current collection on overhead electrified railways	231–241
Scanlon, T. J.	An investigation into the aerodynamic characteristics of catenary contact wires in a cross-wind	311–318
Scepi, M.	Analysis and design of a low-noise railway wheel	179–192
Searancke, E. J.	Design of an efficient crashworthy lifeguard for current and future electric multiple unit bogies	217–230

Shen, G.	The development of a railway dynamics modelling and simulation package to cater for current industrial trends	167–178
Souter, I. A.	An analysis of the development of the tramway/light rail concept in the British Isles	157–166
Stickland, M. T.	An investigation into the aerodynamic characteristics of catenary contact wires in a cross-wind	311–318
Telliskivi, T.	Contact mechanics analysis of measured wheel–rail profiles using the finite element method	65–72
Tirovic, M.	Design synthesis of non-symmetrically loaded high-performance disc brakes. Part 1	101–109
Wang, Q. C.	Dynamic effects of vehicles on tracks in the case of raising train speeds	125–135
Wong, S. M. P.	Design of an efficient crashworthy lifeguard for current and future electric multiple unit bogies	217–230
Wright, N. G.	The slipstream and wake of a high-speed train	83–99
Wu, X. S.	Dynamic effects of vehicles on tracks in the case of raising train speeds	125–135
Zhai, W. M.	Dynamic effects of vehicles on tracks in the case of raising train speeds	125–135
